Full Stack developer for UC Berkeley Extension - *July 2019 to October 2019*
Html5, CSS3, Bootstrap, JavaScript, API'S.
Thinking of a fun way to interact with users, through a translation API and dictionary, we decided to create an application that offers the service of text translations, but with an incorrect final translation making a funny experience for the end-user.
- Collaborated with a team of four we created an application with a translation API that combined with a dictionary API, we then manipulated the final translation of the user by changing the meaning of the initial phrase to be translated.
- Supported with the integration and operation in JavaScript of the API's to send a response to the user.
